Summary

Computer Science undergraduate specializing in Data Science with hands-on experience building Python backend systems, REST APIs, PostgreSQL applications, data/ML pipelines, and production-oriented software workflows. Experienced with backend architecture, database integration, API development, testing, and applied machine learning. Seeking Python, Backend, Data Engineering, or AI/ML opportunities.

Education

IPS Academy Indore, India
Bachelor of Technology in Computer Science and Engineering, Specialization: Data Science Aug 2023 – May 2027

Research Publication

An Integrated AI Model for Multi-Disease Prediction | Scopus-Indexed Journal, Q3 Dec 2024

- Developed a reusable Python ML pipeline covering preprocessing, feature engineering, train/test split, model training, and evaluation for five chronic-disease prediction tasks.
- Applied Random Forest classification to structured clinical datasets and evaluated models using accuracy, confusion matrices, and classification reports.
- Built the research workflow with Python, pandas, NumPy, scikit-learn, matplotlib, and TensorFlow; published in a Scopus-indexed Q3 journal.

Projects

Logistics Management System 2026
Python, Django, PostgreSQL, REST APIs, React, Vite, Playwright, Git

- Independently developed backend modules for inventory, orders, fulfillment, warehouse, shipment, logistics, and finance workflows.
- Implemented a layered Controller → Service → Repository → PostgreSQL architecture separating business logic, data access, and API handling.
- Developed and integrated REST APIs with PostgreSQL-backed workflows; worked on validation, debugging, database interactions, and frontend integration.
- Used Playwright for application-level testing and UAT validation across business-critical workflows; maintained code through Git/GitHub.

GIRAKSHA – AI-Based Rockfall Risk Prediction System | Live Demo | SIH 2025 Finalist, Team Zenware 2025
Demo Login: 2222222222 / Password: 123456 / Python, XGBoost, Random Forest, LSTM, ML/Data Pipelines

- Built a Python ML system for rockfall/landslide risk prediction using terrain, satellite, weather, seismic, and DEM-derived features.
- Combined heterogeneous data sources into a predictive pipeline and applied XGBoost, Random Forest, and LSTM approaches for risk and time-series analysis.
- Worked across data preparation, feature engineering, model development, and application-oriented ML integration for a real-world mining safety problem.

Technical Skills

Languages: Python, SQL, JavaScript, C++
Backend & APIs: Django, REST APIs, OOP, API Integration
Databases: PostgreSQL, MySQL
Data & ML: pandas, NumPy, scikit-learn, XGBoost, Random Forest, LSTM, CNN, NLP, NER, Transformers
Frontend: React, Vite, HTML, CSS
Testing & Tools: Playwright, Git, GitHub, Google Colab, Kaggle
Data Engineering Exposure: Hadoop, Hive, Pig, Sqoop, Flume

Achievements

- Smart India Hackathon 2025 Finalist – Team Zenware.
- Scopus-indexed Q3 research publication in AI/ML-based healthcare prediction.
